

AHMED ALGHOTMY

Senior Strategic Engagement Consultant | Customer Success & Cloud Transformation Advisor

Toronto, ON | 289-993-8828 | ahmed.alghotmy@gmail.com | linkedin.com/in/ahmed-alghotmy

PROFESSIONAL SUMMARY

Senior cloud transformation and customer success leader with 15+ years of experience leading enterprise technology programs across public-sector, federal, and private-sector environments. Trusted advisor to executive and senior stakeholder groups, with a track record owning \$3M+ portfolios, leading multi-workstream AWS-based delivery, aligning business outcomes to technical roadmaps, and improving adoption, governance, operational efficiency, and value realization. Combines Engagement Manager discipline - scope, risk, delivery governance, technical trade-offs, and partner orchestration - with Customer Success strengths in executive relationship management, adoption strategy, operating model maturity, and continuous improvement.

CORE COMPETENCIES

- Engagement Management: Enterprise Program Delivery, Cloud Migration & Implementation, Technical Program Management, Scope/Schedule/Budget Governance, Risk & Issue Management, Executive Status Reporting, Delivery Mechanisms, Partner & Vendor Orchestration
- Customer Success: Strategic Account Advisory, Value Realization, Adoption Planning, Business Case Development, Executive Relationship Management, Outcome/KPI Frameworks, Voice of Customer, Renewal & Expansion Support, Continuous Improvement
- Cloud & Architecture: AWS Cloud, Amazon Connect, Lambda, API Gateway, DynamoDB, Kinesis, Glue, S3, Amplify, Cloud Adoption Framework, Well-Architected Principles, Integration Patterns, Data Pipelines, Security/Compliance Awareness
- Transformation: Operating Model Design, Process Optimization, Change Enablement, Training Readiness, Governance Models, Stakeholder Alignment, Roadmap Development, Technical-to-Business Translation, Public-Sector Transformation

PROFESSIONAL EXPERIENCE

Bell Canada | Senior Business Consultant / Customer Success Manager 2022 - Present | Toronto, ON

- Own and advise across a portfolio of 7 enterprise programs totaling \$3M+ for Government of Ontario and federal client environments, coordinating delivery priorities, stakeholder expectations, risks, dependencies, and measurable outcomes across multiple workstreams.
- Lead AWS-based contact centre and cloud transformation initiatives impacting 4,000+ users, including Amazon Connect, Lambda, API Gateway, DynamoDB, Kinesis, Glue, S3, and Amplify components used to modernize service delivery and operational visibility.
- Act as a strategic advisor to senior public-sector stakeholders, translating business priorities into technical roadmaps, governance models, capability plans, and delivery sequencing across ministries and lines of business.
- Partner with AWS Professional Services, systems integrators, internal delivery teams, vendors, and client stakeholders to align implementation approach, technical dependencies, escalation paths, acceptance criteria, and transition-to-operations readiness.
- Drive approximately 20% improvement in operational efficiency and service scalability through process redesign, API integration, cloud-native architecture enablement, reporting discipline, and adoption-focused delivery governance.
- Lead cross-functional teams of 10-15 resources through discovery, design, build, test, training, deployment, cutover, and sustainment phases, maintaining accountability for delivery quality, stakeholder alignment, and risk mitigation.
- Build customer success mechanisms after go-live, including adoption reviews, training gap identification, enhancement backlogs, operational health tracking, KPI discussions, and continuous improvement recommendations.
- Facilitate executive and senior leadership conversations that connect platform capabilities to business outcomes, including service improvement, citizen experience, operational resilience, workforce readiness, and long-term cloud adoption.
- Create structured delivery artifacts such as roadmaps, RAID logs, governance summaries, stakeholder briefings, SOW inputs, implementation plans, training readiness inputs, cutover considerations, and operational transition recommendations.
- Influence organization-level technology strategy across multiple departments by framing platform decisions around customer outcomes, operating model impact, scalability, security considerations, and supportability.

MCIS Language Solutions | IT Implementations Specialist 2020 - 2022 | Toronto, ON

- Delivered technology implementation programs spanning requirements discovery, vendor coordination, SOW execution, configuration oversight, testing support, stakeholder communications, and operational handoff.
- Improved delivery timelines by approximately 15% by strengthening project governance, clarifying requirements, aligning vendor accountability, and reducing delivery ambiguity across business and technical teams.
- Supported cloud and digital service initiatives by translating operational needs into implementation tasks, rollout plans, user readiness actions, and measurable service improvements.

Optimize Business Solutions | Program Lead 2018 - 2020

- Led business and technology transformation initiatives focused on adoption, process maturity, operational performance, and stakeholder engagement across client-facing programs.
- Improved adoption by approximately 20% through structured change enablement, stakeholder alignment, training coordination, and clearer operating processes for business users.
- Managed cross-functional execution plans, delivery risks, status reporting, and continuous improvement actions to ensure transformation objectives translated into practical business outcomes.

Vodafone | Lead IT Project Manager 2014 - 2018

- Managed enterprise technology and cloud-related programs across cross-functional teams, coordinating delivery governance, technical requirements, vendor dependencies, and implementation milestones.
- Led stakeholder engagement across business, technology, operations, and vendor teams to ensure project scope, risks, trade-offs, acceptance criteria, and business outcomes remained aligned.
- Established delivery governance practices including status reporting, risk management, escalation discipline, documentation standards, and operational readiness checkpoints.

Vodafone Global | Solution Design Lead 2011 - 2014

- Led solution design and rollout activities for global technology programs, translating customer and business needs into scalable technical designs and implementation plans.
- Coordinated multi-region teams and stakeholders to deliver standardized solutions, improve documentation consistency, and support technical decision-making across complex environments.
- Contributed to architecture and design discussions by evaluating scalability, operational support, performance, and business impact considerations.

Vodafone | Product & Subject Matter Expert 2008 - 2011

- Managed product lifecycle activities and provided SME advisory support across service operations, product enhancements, issue resolution, documentation, and stakeholder communications.
- Supported customer-facing teams with technical guidance, operational analysis, and process improvements that strengthened service quality and user adoption.

SELECTED IMPACT HIGHLIGHTS

- Portfolio Leadership: Owned \$3M+ portfolio across 7 enterprise programs with direct impact across 4,000+ users.
- Cloud Transformation: Led AWS-enabled modernization across contact centre, integration, API, data, and operational workflows.
- Executive Advisory: Built trusted relationships with CIO, VP, Director, and senior program stakeholders in complex public-sector environments.
- Delivery Governance: Led multi-workstream delivery teams of 10-15 resources across lifecycle phases from discovery through sustainment.
- Customer Success: Advanced adoption and value realization through KPI tracking, training readiness, governance forums, and enhancement backlogs.
